Education

- **Bachelor of Science (Hons) – Computer Systems (Cyber Security)** (Sep 2021 – Jun 2025)
Nottingham Trent University
Grade Predicted: **First-class** (85% average)
- **BTEC Level 3 National Extended Diploma – Computing and Cyber Security** (Sep 2019 – Jun 2021)
Derby College
Grade Achieved: **D*D*D** (Distinction*, Distinction*, Distinction)

Work Experience

- **Information Technology Placement** (Aug 2023 – Present)
Mercedes AMG High Performance Powertrains
I work in various capacities within the I.T. department; ensuring operational continuity throughout the business, remediating security vulnerabilities, and developing systems to monitor and maintain resource availability.

Certifications

- **ISC2: Certified in Cyber Security (CC)** (Jul 2023)
- **Microsoft: Security, Compliance, and Identity Fundamentals** (Jun 2023)

Awards

- **Department of Computer Science Prize for Outstanding Performance** (Sep 2023)
Awarded for "Outstanding Performance" in Year Two of BSc (Hons) Computer Systems (Cyber Security)
- **Ryland Consulting & Department of Computer Science Prize for Exceptional Performance** (Sep 2022)
Awarded for "Best Progress" in Year One of BSc (Hons) Computer Systems (Cyber Security)
- **University Language Programme Certificate of Achievement** (Jun 2023)
Awarded for achieving a Distinction grade in University Language Programme: Chinese (Mandarin) Stage 1

Technical Skills

- Programming using the Python, JavaScript, Java, and C++ languages; amongst others – with knowledge of the Software Development Life Cycle, Agile methodologies, and CI/CD processes.
- System Management in Windows and Linux-based environments. Including the use of Active Directory Domain Services, Azure, Docker, and Amazon Web Services (S3, IAM, and CloudFront).
- Integration and use of Database Technologies and Database Management Systems (Relational; MySQL, SQLite, Document-based; MongoDB).

Projects

- **File Sharing System:** A self-hostable file sharing system that accepts file upload requests and returns a shareable link pointing to the uploaded file, making use of the Open Graph Protocol to enable rich object support.
Technologies: JavaScript (NodeJS), HTML, Source: <https://github.com/fwiko/sharex-server>
- **Distributed Load-Balancer:** A load-balancing system created for my "Distributed Network Architectures and Operating Systems" university module – after an investigation into High Performance/Distributed Computing.
Technologies: Java, Source: Available on request.
- **Remote Keylogger:** A keylogger project created with a "server" application capable of accepting connections and handling data sent from multiple remote nodes simultaneously.
Technologies: Python, Sockets, Source: <https://github.com/fwiko/bind-keylogger>
